TALENT BRIDGE

A web-based platform connecting students and employers through skills-based opportunity matching.

Team Members :

Sai Teja Putta - A00104280

Asif Shaik - A00089584

Thirupathi Vadthya - A00083681

Bhanu Prasad Reddy - A00105141

Problem Statement

Students seeking internships, placements and project opportunities may find it difficult to identify opportunities that align with their existing skills, experience and career interests. Employers, meanwhile, need to review candidates against the skills and requirements associated with their opportunities. Traditional listing and application processes may not provide sufficiently clear explanations of how a student's profile aligns with an opportunity.

Talent Bridge aims to address this challenge through a web-based platform that connects students and employers using structured skills profiles, opportunity requirements and explainable matching with the potential to support university careers services.

The project will investigate how skills-based matching can support opportunity discovery and candidate selection while allowing users to understand the reasons behind each recommendation.

Project Aim

To design and develop a web-based platform that supports university students and employers in discovering, evaluating and managing suitable internship, job and project opportunities.

Project Objectives

1. Develop secure registration and login functionality for students and employers.
2. Allow students to maintain profiles containing skills, experience and career interests.
3. Allow employers to create and manage opportunities with defined skill requirements.
4. Implement search, filtering and application management functionality.
5. Develop an explainable matching algorithm that compares student skills with opportunity requirements.
6. Identify skill gaps and explain why an opportunity is recommended.
7. Test the application's functionality, security and matching results using defined test cases.

QUESTIONS:

How might we help students discover opportunities that genuinely match their skills and career interests?

How might we help employers identify suitable candidates without relying only on manual CV screening?

How might we explain matching results so students understand their strengths and missing skills ?

Persona 1: Student

Name: Jahnavi

Background: A postgraduate Computing student seeking a software engineering internship.

Goals :

- Find opportunities relevant to her skills.
- Understand which skills employers expect.
- Track applications in one place.

Frustrations :

- Too many irrelevant job listings.
- Uncertainty about whether she meets requirements.
- Difficulty identifying skills she needs to improve.

Needs from Talent Bridge :

- Personalised opportunity recommendations.
- Clear match explanations.
- A skills-gap summary and application tracker.

Fig:1

Persona 2: Employer

Name: Teja

Background: A hiring manager at a small software development company recruiting interns.

Goals :

- Find candidates with relevant technical skills.
- Publish opportunities efficiently.
- Manage applications and shortlist candidates.

Frustrations :

- Receiving applications from candidates who lack essential skills.
- Spending time comparing CVs manually.
- Difficulty explaining why candidates were shortlisted.

Needs from Talent Bridge :

- Structured opportunity requirements.
- Candidate matching and filtering.
- Clear explanations of matching scores.
- Application and interview status management.

CODE OF CONDUCT :

Expected Behaviour In Team

- **Be Respectful :** Value each other's ideas, styles and viewpoints. We may not always agree, but disagreement is no excuse for poor manners. Be respectful in all interactions and communications, especially when debating the merits of different options. Take responsibility for your impact and your mistakes – if someone says they have been harmed through your words or actions, listen carefully, apologize sincerely, and correct the behaviour going forward.
- **Be Direct but Professional :** We are likely to have some discussions about if and when criticism is respectful and when it's not. We *must* be able to speak directly when we disagree and when we think we need to improve. We need to be honest and direct, as well as respectful.
- **Be Inclusive :** Seek diverse perspectives. Diversity of views and of people on teams powers innovation, even if it is not always comfortable. Encourage all voices. Help new perspectives be heard and listen actively. If you find yourself dominating a discussion, it is especially important to step back and encourage other voices to join in. Alternative ways to contribute or participate when possible.
- **Understand Different Perspectives :** Our goal should not be to "win" every disagreement or argument. A more productive goal is to be open to ideas that make our own ideas better. Strive to be an example for inclusive thinking. "Winning" is when different perspectives make our work richer and stronger.
- **Participation and Responsibility:** All team members are expected to participate actively in planning, design, development, testing and documentation, according to their agreed responsibilities.

Team members should:

- Complete assigned tasks within agreed deadlines.
- Attend scheduled meetings or provide advance notice when unable to attend.
- Communicate progress, difficulties and potential delays promptly.
- Contribute fairly to discussions, decisions and project deliverables.
- Keep the shared task board and relevant project documentation updated.
- Support other team members when reasonably possible.
- If a team member encounters difficulties completing a task, they should inform the team early so that appropriate support or adjustments can be arranged.

Behaviour That Will Not Be Tolerated

- **Violence and Threats of Violence :** Violence and threats of violence are not acceptable - online or offline. This includes incitement of violence toward any individual, including encouraging a person to commit self-harm. This also includes posting or threatening to post other people's personally identifying information ("doxxing") online**.**

- **Personal Attacks :** Conflicts will inevitably arise, but frustration should never turn into a personal attack. It is not okay to insult, demean or belittle others. Attacking someone for their opinions, beliefs and ideas is not acceptable. It is important to speak directly when we disagree and when we think we need to improve, but such discussions must be conducted respectfully and professionally, remaining focused on the issue at hand.

Disruptive Behaviour

Behaviour that repeatedly interferes with the team's ability to collaborate or complete the project will not be accepted.

Examples include:

- Repeatedly interrupting or preventing other team members from contributing.
- Deliberately dominating meetings or dismissing others' opinions.

When concerns arise, the team will seek to resolve them through respectful discussion. If the issue cannot be resolved internally, the team may seek guidance from the module tutor or follow the university's relevant procedures.

Agreement and Commitment

All team members are expected to read, understand and follow this Code of Conduct throughout the Talent Bridge project.

By agreeing to this document, team members commit to respectful communication, inclusive collaboration, accountability and shared responsibility for the success of the project.
